(54) Title: A METHOD OF ESTABLISHING AND CARRYING OUT COMMUNICATION BETWEEN A DATA SOURCE AND A USER

(57) **Abstract:** The present invention relates to a method of establishing and carrying out communication between a data source and a user, where said communication is effected via a fixed or a mobile network, wherein a program that handles said presentation to the user is placed in the user's own terminal which, in turn, is connected, via a server, to a data source that contains data, and wherein the terminal handles data to and from the server such that when receiving information from a user the program clears this information from the layout and protocol and sends to the server and further to the data source solely interaction data, and wherein, on the other hand, when receiving data from the data source the program places this data in a correct protocol for presentation to the user in the right presentation form and with the correct user layout.
